

TDK-71

THERMODYNAMIC STEAM TRAP

GENERAL FEATURES

Ayvaz TDK-71 thermodynamic steam traps leak tightness parts are made of stainless steel and body is made of stainless steel casting. Output pressure shouldn't pass %80 of initial pressure at operating conditions. TDK-71 can work automatically depending on condensate load. We can supply all spare parts. Filter is type Y and cleaning is very easy.

Ayvaz TDK-71 should be assembled to the pipe line at horizontal position for working efficiently and long working time. Isolation valves should be used for safety during the maintenance and steam traps changing.

Product Features

| | |
|---------------------|--------------------------|
| Body | Stainless Steel AISI 304 |
| Cover | Stainless Steel AISI 304 |
| Internals and float | Stainless Steel AISI 304 |
| Connection Types | Threaded |

Operation Conditions

| | |
|----------------------------------|--------|
| Max. Operating Pressure (PMO) | 42 bar |
| Body Pressure Class | PN63 |
| Max. Operating Temperature (TMO) | 400°C |

Discharge Capacity
(1/2"-1")

TDK-71 THERMODYNAMIC STEAM TRAP

| SPARE PARTS | | |
|-------------|-----------------|-------------------------------------|
| No | Name | Material |
| 1 | Body | Stainless Casting ASTM A743(CA 40F) |
| 2 | Cover | Stainless Steel AISI 304 |
| 3 | Strainer Screen | Stainless Steel AISI 304 |
| 4 | Disc | Stainless Steel AISI 420 |
| 5 | Discharge Bolt | Stainless Steel AISI 304 |

| DIMENSIONS | | | | | |
|------------|----|----|-----|----|----|
| Size | L | H | H1 | H2 | AA |
| 1/2" | 78 | 41 | 95 | 33 | 41 |
| 3/4" | 90 | 43 | 110 | 39 | 41 |

TDK-71 THERMODYNAMIC STEAM TRAP

OPERATION

At start-up, the disc is pushed off its seat by any air or condensate entering the trap. When the steam enters the trap, it passes through the reduced area at the face of the disc, increasing in velocity and, therefore, decreasing in pressure. Some of the steam is discharged directly into the outlet stream, but a portion of it passes to a control chamber above the disc. The disc snaps shut because the pressure in the control chamber above acts on the whole disc, while the inlet pressure of the high-velocity steam acts only on a small area of the disc.

A small bleed groove across the disc allows the steam and air to bleed out of the control chamber over time. When the force above the disc is overcome by the force of incoming steam, condensate or air on the face of the disc, the trap opens, discharging condensate that has accumulated during the cycle.

| PART LIST | | |
|-----------|-----------------|--|
| NO | PART NAME | MATERIAL |
| 1 | Discharge Bolt | Stainless Steel AISI 304 |
| 2 | Strainer Screen | Stainless Steel AISI 304 |
| 3 | Body | ASTM A743 CA40F Corrosion resistant alloy |
| 4 | Cover | Stainless Steel AISI 304 |
| 5 | Disc | Stainless Steel AISI 420 |
