STAINLESS STEEL BALL VALVES / TWO PIECES FLANGED

GENERAL FEATURES

The essential element in the ball valve is a ball which has a hole in the middle. This ball's 90° turn move it from fully opened to closed position. The ball valves are primarily used in places where it is necessary to open and close a lot or to open and close quickly.

The advantages are low pressure losses, easy opening and closing, good sealing, light weight and low space occupancy. Sealing: It is made up of two stages as a sphere seal and a shaft seal.
