

## C16 Wi-Fi Thermostat

Advanced Wi-Fi thermostat for electric underfloor heating

The C16 Wi-Fi thermostat is an intuitive programmable thermostat designed to control electrical underfloor heating systems. Install the App on your smart device to control the heating system remotely with this Wi-Fi thermostat.

An App is available in the Apple App Store and on Google Play. Within the App you can program and adjust settings. To control different rooms additional thermostats can easily be added.

Besides the Wi-Fi connection this thermostat can also operate as a stand alone unit. It is fully programmable with the easy user interface and touch buttons.

Also an Open Window function is included. When the temperature suddenly drops, the thermostat will automatically switch off preventing additional electricity costs.
