

NEW FAN COIL UNITS

Expansion of the product offer!

- ✓ Modern and renewed aesthetics
- ✓ Expansion of the product range
- ✓ Addition of ductable units with double panel
- ✓ Ducted units equipped with additional on-board coil
→ no additional module required
- ✓ Wide range of available options, especially control panels
- ✓ MADE IN ITALY products
- ✓ Reduced delivery times for all possible configurations.

CONFIGURATIONS

Different configurations are available:

2 Pipes

COOLING ONLY

2 Pipes

HEATING ONLY

2 Pipes

COOLING + HEATING

2 Pipes

COOLING + SUPPLEMENTARY ELECTRICAL HEATER

4 Pipes

COOLING + HOT WATER COIL FOR 4 PIPE SYSTEM

FAN COIL UNITS WITH CABINET AND 6-SPEED OR EC INVERTER CENTRIFUGAL FANS

EC INVERTER FAN

- Modern styled cabinet with smoothed outline to perfectly match with any interior decoration. Standard white colour (similar to RAL9010/9003). Made of thick steel-sheet, galvanized and finished by a polyvinyl chloride film to make it resistant to rust, corrosion and chemical agents. Bearing structure made of galvanized steel-sheet with internal thermal-acoustic insulation.
- Air delivery grill by fixed fins made of grey ABS adjustable on 2 positions (air flow can be reversed rotating grill by 180°) equipped with small sliding side doors for easily access to the internal control panel.
- Drain pan provided with condensation drain and thermal insulation.
- Coil made of copper pipes and aluminum fins, with coil connections provided with anti-torsion system, manual air vent and water drain valves.
- Universal connecting terminal (mounted for horizontal versions, loose accessory for vertical versions).
- Air filter easy to remove and to wash, made of a metal frame holding filtering section.
- Fan section based on centrifugal fans with double air inlet and last generation plastic blades, directly coupled to the 6-speed electric motor with 3 speeds connected in the standard configuration.
- Fan section based on centrifugal fans with double air inlet and last generation plastic blades, directly coupled to the EC inverter electronic motor. Modulating regulation with 0-10Vdc signal with control panels provided as accessory or with independent regulation system.

VP - Vertical unit with bottom inlet and vertical delivery

VH - Vertical unit with front inlet and vertical delivery

VE - Horizontal unit with rear inlet and horizontal delivery

VO - Horizontal unit with bottom inlet and horizontal delivery

AIR FLOW, ORIENTATION AND INCLINATION OF THE DELIVERY GRID FINS

Delivery grids in ABS: 2 orientations of the grids are possible

FAN COIL UNITS FOR BUILT-IN INSTALLATIONS WITH 6-SPEED OR EC INVERTER CENTRIFUGAL FANS.

EC INVERTER FAN

- Bearing structure made of extremely thick galvanized steel-sheet with holes (buttonholes) for ceiling/wall mounting directly through the structure provided with internal thermal-acoustic insulation.
- Air filter easy to remove and to wash, made of a metal frame holding filtering section.
- Drain pan provided with condensation drain and thermal insulation.
- Coil made of copper pipes and aluminum fins, with coil connections provided with anti-torsion system, manual air vent and water drain valves.
- Universal connecting terminal (mounted)
- Fan section based on centrifugal fans with double air inlet and last generation plastic blades, directly coupled to the 6-speed electric motor with 3 speeds connected in the standard configuration.
- Fan section based on centrifugal fans with double air inlet and last generation plastic blades, directly coupled to the EC inverter electronic motor. Modulating regulation with 0-10Vdc signal with control panels provided as accessory or with independent regulation system.

IV - Vertical unit with bottom inlet and vertical delivery

WATER CASSETTE WITH 3-SPEED OR EC INVERTER RADIAL FAN

EC INVERTER FAN

- Bearing structure made of extremely thick galvanized steel-sheet with Internal thermo-acoustic insulation. External brackets on the 4 corners for easy fixing to the roof.
- Cover panel, white RAL 9003 colour, with neutral and well-balanced shapes that fit well into any environment. Made of ABS by injection, very resistant to corrosion, rust and environmental agents.
- Central air intake grill with four manually adjustable air supply side flaps. Friction snap flaps, to ensure stable and uniform positioning.
- “Hook & Fix” coupling system, designed to facilitate the installation, removal and maintenance operations, eliminating the positioning problems typical of these systems.

WATER CASSETTE WITH 3-SPEED OR EC INVERTER RADIAL FAN

EC INVERTER FAN

- Air conveyor and drain condensate pan made by ABS injection to guarantee great strength and long life. Condensate drain pan obtained in a single piece and equipped with a drain with cap for the total emptying of the pan in case of maintenance.
- Centrifugal type condensate pump, including no-return valve to avoid frequent on/off and a two-level floater for the control of the condensate level and for alarm activation.
- Coil made of copper pipes and aluminum fins fixed by mechanical expansion. Hydrophilic aluminum fins for a better evacuation of the condensate.
- Universal connecting terminal (mounted)
- Air filter easy to remove and to wash, made of a metal frame holding filtering section.
- Radial fan with wing profile blades and built-in 3-speed electric motor.
- Radial fan with wing profile blades and built-in EC Inverter electric motor. Modulating regulation with 0-10Vdc signal with control panels provided as accessory or with independent regulation system.

DUCTABLE FAN COIL UNITS WITH 5-SPEED OR EC INVERTER CENTRIFUGAL FANS

EC INVERTER FAN

- Single skin panel units are made of extremely thick galvanized steel-sheet, resistant to rust, corrosion, and chemical agents. Internal thermal-acoustic insulation. Self-supporting and removable panels provided with holes for ceiling/wall mounting directly through the main casing.
- Double skin panel units are provided with 20mm thick panels made of internal galvanized steel sheet, external pre-painted steel white RAL 9002 colour and glass fiber insulation. Self-supporting and removable panels provided with holes for ceiling/wall mounting directly through the main casing.
- Double inclination drain pan optimized for condensate drainage, provided with drainpipe (on the same side of coil connections) with external thermal insulation.
- Highly efficient coil made of copper pipes and aluminum fins fixed by mechanical expansion, with water connections provided with anti-torsion system, manual air vent and water drain valves.

DUCTABLE FAN COIL UNITS WITH 5-SPEED OR EC INVERTER CENTRIFUGAL FANS

EC INVERTER FAN

- Universal connecting terminal (mounted).
- Fan section provided with centrifugal fans with double air inlet and last generation plastic blades, directly coupled to a 5-speed electric motor, with 3 speeds connected in the standard configuration.
- Fan section provided with centrifugal fans with double air inlet and last generation plastic blades, directly coupled to the EC inverter electronic motor. Modulating regulation with 0-10Vdc signal with control panels provided as accessory or with independent regulation system.

Standard hydraulic connections on the right facing the air flow. They can be inverted on site.

Regulation network

STAND-ALONE FUNCTION

- Independent control to control 1 only/single unit.
- Classic remote wall-mounted control which controls a small unit (ex. one fan-coil) installed in the same environment.
- The controller cannot be connected to more than 1 unit, or networks, or UCB communicating systems.

MASTER UNIT FUNCTION

System consisting of a controller that controls one unit (Master), which in turn controls other units (Slave).

There are several models with different operating modes:

- **MASTER-SLAVE for the open-space regulation**
- **MASTER-SLAVE for the regulation of the areas at fixed set-point**
- **MASTER-SLAVE for the regulation of the areas with recalibrated parameters**

MASTER-SLAVE for the Open-Space control

- All the Slaves work in the same way as the Master.
- The system considers that all the units to be controlled (Master + Slave) are installed in a single room (open-space)
- Designed to prevent that all these units, installed in the same room, work in different way (ex.: one unit working at Max speed , one at Min ... one at OFF).
- Usually, a Master controller measures the temperature at a single point through a single sensor and in accordance with operating mode (set only on the Master controller) it adjusts all units in the same way.

The simplest, cheapest and most functional solutions:

- ✓ **3 speed AC~230V units:** install 1 simple stand-alone controller + 1 **MC4** interface card (or 2,3, ... **MC4** depending on requirements)
- ✓ **For EC~230 units:** install 1 simple stand-alone controller that controls several units connected in parallel (check max connectable number)

MASTER-SLAVE for the control of the areas at Fixed Set-Point

- All the Slaves work with the same parameters (set with the Master), but independently with their own local temperature.
- Usually, each Slave unit comes with its own Slave card and its own local temperature sensor.
- With a single Master are set the wished working parameters (ex. AUTO speed and SET-POINT=20°C), which are then transferred and acquired by all the Slave cards (same parameters for all the Slaves).
- The Slaves work all with the same settings, but each one of them at its own local air temperature.
- The Slaves can also be installed in different rooms (ex. independent offices for which setting the same temperature, the same speed, etc.. but at the same time there is a single centralized control).

MASTER-SLAVE for the control of the areas with Recalibrated Parameters

- All the Slaves work at the same basic parameters (set by the Master), but they can be connected to a local control that allows the local re-calibration in autonomy, ensuring maximum flexibility and independence.
- The system considers that the Slave units to be controlled are installed in different rooms (and hence with the possibility to have different instant temperatures in each room) for which it is left to the user the possibility to manage locally some regulation parameters.
- The system can also be architected to achieve maximum levels of autonomy (each Slave can be provided with local control for the recalibration).
- This kind of Master-Slave is usually used in the systems with **UCB supervision**: in these cases the Master is provided with integrated communication (connected to the network), while the Slave card is not connected, then the central unit will see (only) the Master as the only unit of the area.

1	Master controller
2	Slave card
3	Local temperature sensors
4	Slave units
5	Local recalibration control

MC4

Multicontrol connection card

Applicable to:

- 2 Pipe
- 4 Pipe

- Suitable to control up to max No 4 motors by 3A.
- Each control panel can control one 3-speed motor only
- One control panel can control up to 50 MC4 cards connected in parallel
- All the units controlled by the MC4 work in the same way, according with the control panel settings
- The interface card is an accessory to be added to the remote control.

Control with MC4

MC4 is the simplest and most economic system to realize Master-Slave system suitable for Open-Space control.

.....
up to 4 units

STAND ALONE

MC4

Any type of
terminal unit

MASTER-SLAVE regulation for Open-Space

MASTER-SLAVE regulation at Fixed Set-Point

STAND ALONE

Any type of
terminal unit

In serie or in parallel connections

DRH2

N → Max n° of connectable units: make sure that the total impedance is compatible with the 0-10Vdc output of the controller

UCB

Universal control card with Modbus RTU protocol

Applicable to:

- 2 Pipe
- 4 Pipe

- Universal card for AC or EC units
- Can be networked by a Bus data transmission as the local unit network (peripheral unit).
- Complete and flexible card, with Dip-switch address + Dip-switch configuration. The device is pre-programmed by the factory to save time during installation.
- Able to manage all unit's parameters, like: "Speed manual/AUTO", "Thermostated or always ON motor", "Change-over Summer/Winter manual/AUTO (for 2 Pipe units, AUTO in function of the water temperature with SNA sensor mandatory)"
- Compatible with all supervision systems
- Communication MODBUS protocol

SYSTEM COMPONENTS

Components	Description
UCB	UNIVERSAL regulation card with MODBUS
SNA	Air temperature sensor each local unit (mandatory accessory)
SNW2 SNW3	<ul style="list-style-type: none"> - Summer/winter water temperature sensor - Minimum water temperature sensor (optional accessories, only if request)
IRC	Wall mounted digital control (optional accessories, only if request)

Accessories

G.I. INDUSTRIAL
HOLDING

CLINT
CLIMATIZZAZIONE INTEGRATA

Z

Couple of feet

Availability	
VXM 123÷614	✓

They are used to support the fan coil unit whenever the wall fixing is impossible and aesthetically to cover the hydraulic and electrical connections coming from the floor; pedestal in pre-painted metal sheet.

PP/TP

Rear panel and rear closure

PP: Rear panel

Low closing back panel
made of pre-painted steel

TP: Rear closure

Bottom closing panel without grill
made of pre-painted steel

Availability

VXM 123÷614

FTN/PHN

False frame with panel for IV version

Availability	
VXI 123÷614	✓ (Only for IV version)

BCN1: connecting terminal for FTN. Suitable for AC versions

BCN2: connecting terminal for FTN. Suitable for EC versions

FTN: false frame for IV version

PHN: aesthetic panel for FTN

It is necessary to specify the water coil connection side

LX: Left side (STD)

RX: Right side

GR

Cover panel with grill

Single cover panel.
Suitable for sizes 132÷184

Availability

TXW 132÷284

✓ (Included)

Double cover panel.
Suitable for sizes 253÷284

BC

Universal connecting terminal

Availability	
VXM 123÷614	✓ (included only in horizontal versions)
VXI 123÷614	✓ (included)
DWX 183÷364	✓ (Included)
TXW 132÷284	✓ (Included)

The universal connecting terminal is always required when installing a remote control

C/C1/C2

Auxiliary condensate drain pan

Availability	
VXM 123÷614	✓ C1: vertical versions ✓ C2: horizontal versions
VXI 123÷614	✓ C1: vertical versions ✓ C2: horizontal versions
DWX 183÷364	✓ C: all versions
TXW 132÷284	✓ C: all versions

C: Auxiliary condensate drain pan

C1: Auxiliary condensate drain pan for vertical versions

C2: Auxiliary condensate drain pan for horizontal versions

Suitable to collect 2 and/or 3 way valves condensate.

MP/MP1/MP2

Condensate drain pump

Availability	
VXM 123÷614	✓ MP1: vertical versions ✓ MP2: horizontal versions
VXI 123÷614	✓ MP1: vertical versions ✓ MP2: horizontal versions
DWX 183÷364	✓ MP: all versions

MP: Condensate drain pump

MP1: Condensate drain pump for vertical versions

MP2: Condensate drain pump for horizontal versions

Max water flow 8 l/h with 0 m.w.c.,
Water flow 6,5 l/h with 1 m.w.c.,
Water flow 4 l/h with 3 m.w.c.,
water flow 0 l/h with 6 m.w.c.
Provided with 8A@250V alarm contact.

EH/EH1/EH2

Supplementary electrical heater

Availability	
VXM 123÷614	✓ EH1 ✓ EH2
VXI 123÷614	✓ EH1 ✓ EH2
DWX 183÷364	✓ EH
TXW 132÷284	✓ EH1 ✓ EH2

For low capacities, it is possible to require EH/EH1/EH2 electrical heaters integrated inside the unit, installed immediately after the water coil. In this way the unit will be more compact.
Compatibility for both 2 Pipe (1 coil) and 4 Pipe units (2 coils).

This solution must be required when purchasing the unit, as the electrical heater is installed and tested directly when assembling, getting a complete and tested product at the factory.
EH/EH1/EH2 are 230Vac/1Ph/50-60Hz, 2-stages (can be powered a single stage at a time, NOT both at once, unit can be overheated)

Electrical heaters max working temperature: 350°C.

SFA/SFD

Flanges

SFA: Air renewal flange

Galvanized steel ring for external air intake Ø 72 mm x L 100mm.

Availability

TXW 132÷284

✓ (Included)

SFD: Duct connection flange

Galvanized steel ring for treated air supply in the adjacent room Ø 155 mm x L 100mm.

SG/SMG

Manual and on/off motorized dampers with grid

SG: manual damper with grid

Availability	
VXM 123÷614	✓

SMG: on/off motorized damper with grid

Closed damper: external air flow 0%, internal air flow 100%
Damper totally open: external air flow 100%, internal air flow 0%

S/SMF

Manual and on/off motorized dampers

S: Manual damper

SMF: On/off motorized damper

Availability	
VXI 123÷614	✓

Closed damper: external air flow 0%,
internal air flow 100% -
Damper totally open: external air flow
100%, internal air flow 0%

MBL/MBP/MBLS/MBPS

Manual and on/off dampers with servo-motor

Manual damper with closing 0-33%-100-67%

- MBL
- MBP (for GP versions)

On/off damper with servo-motor

- MBLS
- MBPS (for GP versions)

Availability

DWX 183÷364

P3M/P3A

Plenum with round ducts

P3M: Supply plenum with round ducts

P3A: Intake plenum with round ducts

Availability	
VXI 123÷614	✓

PM/PR

Straight plenum

PM: Supply plenum

PR: Intake plenum

Availability

VXI 123÷614

P9M/P9A

Supply plenum with 90° ducts

P9M: Supply plenum with 90° ducts

Availability	
VXI 123÷614	✓

P9A: Intake plenum with 90° ducts

P3LM/P3PM/P3LA/P3PA

Supply and intake plenum with round ducts

Supply plenum with round ducts

- P3LM
- P3PM (for GP versions)

Intake plenum with round ducts

- P3LA
- P3PA (for GP versions)

Availability	
DWX 183÷364	✓

Steel section with spigots (3 ϕ , 5 ϕ or 6 ϕ) with variable diameter made of plastic material – Internal insulation

P9LM/P9PM/P9LA/P9PA

Supply and Intake plenum with 90° ducts

Supply plenum with 90° ducts

- P9LM
- P9PM (for GP versions)

Availability

DWX 183÷364

Intake plenum with 90° ducts

- P9LA
- P9PA (for GP versions)

Y: 325

Y: 365 (GP)

SSM/SPM/SSR/SPR

Air intake and supply labyrinth silencer section

Supply labyrinth section

- SSM
- SPM (for GP versions)

Intake labyrinth section

- SPR
- SSR (for GP versions)

Availability

DWX 183÷364

AFL1/AFP1/AFL2/AFP2/AFL3/AFP3

Air filter and section filter

Flat air filter

- AFL1
- AFP1 (for GP versions)

Section with flat filter

- AFL2
- AFP2 (for GP versions)

Section with undulated filter

- AFL3
- AFP3 (for GP versions)

False frame in 4 parts

Availability

DWX 183÷364

GMS/GAF

Air intake and supply grill

GMS: Air supply grill

GAF: Air intake grill

Availability

VXI 123÷614

PLM/PPM/PLR/PPR

Cover panel with air intake and supply grill

Cover panel with air supply grill

- PLM
- PPM (for GP versions)

**Cover panel with air intake grill**

- PLR
- PPR (for GP versions)

Availability

DWX 183÷364

TMB3/TMB4

Minimum hot water temperature thermostat

Availability	
VXM 123÷614	✓
VXI 123÷614	✓
DWX 183÷364	✓
TXW 132÷284	✓

TMB3 → T. SET: 32°C

TMB4 → T. SET: 42°C

V22/V22M/V42/V42M

2-Way on/off and modulating valves

Availability	
VXM 123÷614	✓
VXI 123÷614	✓
DWX 183÷364	✓
TXW 132÷284	✓

V22/V22M

2-Way on/off and modulating valves for 2 Pipe system

V42/V42M

2-Way on/off and modulating valves for 4 Pipe system

V26/V26M/V46/V46M

2-Way on/off and modulating valves with shut-off (ball)

Availability	
VXM 123÷614	✓
VXI 123÷614	✓

V26/V26M

2-Way on/off and modulating valves with 2 shut-off (ball) for 2 Pipe system

V46/V46M

2-Way on/off and modulating valves with 4 shut-off (ball) for 4 Pipe system

V23/V23M/V43/V43M

3-Way on/off and modulating valves

Availability	
VXM 123÷614	✓
VXI 123÷614	✓
DWX 183÷364	✓
TXW 132÷284	✓

V23/V23M

3-Way on/off and modulating valve for 2 Pipe system

V43/V43M

3-Way on/off and modulating valves for 4 Pipe system

V25/V25M/V45/V45M

3-Way on/off and modulating valves with shut-off (ball)

Availability	
VXM 123÷614	✓
VXI 123÷614	✓

V25/V25M

3-Way on/off and modulating valves with 2 shut-off (ball) for 2 Pipe system

V45/V45M

3-Way on/off and modulating valves with 4 shut-off (ball) for 4 Pipe system
